1. What's new in the Release

Consel PLUS v7.119 provides new features and improvements for the entire system. New functionalities have been added for both the NAI and CapMax systems.

- a) **Indoor Location - ConSEL Indoor Positioning allows dispatchers to monitor the position of radios inside buildings, easily switch between floors and dynamically switch between iBeacons inside buildings and GPS positioning outside buildings.**
- b) **Raster Map Editor - allows for the calibration of raster maps to suit the client's needs. It takes into account the levels (floors) of individual maps and is fully adapted to the requirements of the Indoor Positioning functionality.**
- c) **Improved work with the map, both OpenStreet and client raster maps.**

2. Product Versions

ConSEL PLUS v7r119 has been tested with MOTOTRBO release M2025.03

3. Additional Info

Feature Training:

- 1) ConSELPLUS
